(NAA), Nuclear Reaction Analysis (NRA) and combinations thereof, the apparatus

comprising:

one or more sensors, the one or more sensors attached to a surface on the

integrated circuit or micromechanical device;

wherein the energy source is a battery functional at temperatures up to 150°C;

wherein the electronic device comprises an analog to digital converter, a signal

conditioning device, and a solid state memory device for collecting data;

the apparatus further comprises an external wireless receiving module wherein the

collected data is transmitted digitally in real-time from the electronic device to the

external wireless receiving module;

the apparatus further comprising an isolation material to protect the electronic

device from hostile manufacturing or processing environments;

and wherein the one or more sensors, the electronic device components and the

battery are radiation hard.
